On Site Inspections

During the construction or modification phase of facilities, systems, refineries, power plants, mills, etc., there becomes a need for on-site inspection services. IQS can adequately supply Inspection and Quality Assurance personnel to assist your organization for proper development, implementation, and control of your Project Quality Plan. IQS is ready to serve you in any or all of the following areas of expertise:

- Visual Inspection & Nondestructive Testing
- Piping & Mechanical Works
- Electrical & Instrumentation Works
- Civil & Structural Works
- Painting, Insulation & Coating Works
- IT & Telecommunication Works

Occupational Health & Safety Audits

OHSAS 18001 is a management system specification that responds to health and safety management in the same way that ISO 9001 responds to Quality Management and ISO 14001 responds to Environmental Management. In fact OHSAS is almost identical to ISO 14001 except that the words 'Health and Safety' take the place of 'Environment'. OHSAS 18001 is really useful where companies have an integrated Quality, Environmental and Health & Safety System. In this case the Certification Body can certify the integrated Management System. However, some companies that may have particular safety concerns or issues, or where safety is a political issue, are choosing to become certificated only to OHSAS 18001. IQS is able to carry out training, implementation, audits to the standard and provide consultancy services to establishing OHSAS system for client's organization.

Environmental Management System

The ISO 14000 family addresses various aspects of environmental management. It provides practical tools for companies and organizations looking to identify and control their environmental impact and constantly improve their environmental performance.
